

CASE STUDY: ACF-SR Superior Results on Professional Turf

Manderley Turf Products Test Site

160, 8818 111 St, Fort Saskatchewan, AB T8L 3T4 Saskatchewan, Canada

- 20 acre turf evaluation of ACF-SR. (ACF-SR provided to Manderley by exclusive Canadian ACF distributors, AdvancedAg, Raymond, Alberta, Canada).
- Dose Rate: 2 gallons per acre via ACF-AgKit
- Applied early June, 2019 via combination with irrigation water.
- Initial Conditions: Fields 33 and 34 considered identical in turf properties by the agronomists at Manderley Turf Products at time of dosing.
- **Field 34 is CONTROL, Field 33 is Treated with ACF-SR**

Superior turf growth with ACF-SR photo taken by drone, 3 weeks after ACF-SR application:

For the best your best turf ever, apply ACF-AgKit at dose rate of 2 gallons per one acre of turf (any grass type, any time of the season). Repeat every 2 to 4 weeks. Mix with irrigation water. Always use enough dilution water to get good even coverage, and spray directly on turf.

For best results, apply at dusk. Avoid spraying during peak sunlight. Spraying just before or after rain is also helpful, as the extra moisture helps deliver ACF-AgKit to the rhizosphere (active root zone of grass or any plant) where it does the most work!
